Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8, 19 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 59164399; 3/9/83. JP '399 teaches a composition comprising 0.25-60% hypochlorite plus 0.25-25% peroxide. Based on these amounts, the composition can be formulated to have a weight ratio of the hypochlorite to the peroxide of no less than 10:1. See abstract. JP' 399 teaches that the source of hypochlorite is sodium hypochlorite and the source of the peroxide is hydrogen peroxide or sodium carbonate hypochlorite which is essentially sodium hypochlorite. See abstract. JP '399 teaches that the composition can further comprise a surfactant such as betaine (organic matter). See abstract. In claim a to a composition, a statement to the composition's intended use has no patentable significance. JP ' 399 teaches a method of controlling bacteria (microorganisms) comprising contacting bacteria with the composition. See abstract.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 9-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP '399 as applied to claims 1-8,19 above. See 102(b) rejection above. JP '399 teaches all that is recited in claims 1-8,19 except for the composition being prepared by the addition of the peroxide to the hypochlorite in a vessel. Betaine taught by JP '399 is organic matter that can be present in the instant process since the phrase "carried out in essentially the absence of organic matter" does not totally exclude organic matter like betaine. It is important to note that the simple act of adding and mixing ingredients in a vessel (container) is well practiced in the art and is therefore unpatentable.
